

Product Brochure:

High-Precision, Bluetooth Data-Logging Sliding Inclinometer

High-Precision Bluetooth Sliding Inclinometer

Engineered with complete proprietary technology, the Retisberg Sliding Inclinometer revolutionizes geotechnical monitoring. Our groundbreaking smart-phone-as-a-handheld solution, coupled with Bluetooth wireless technology and a dedicated app, empowers you to capture, analyze, and visualize data effortlessly. This integrated system, synchronized with a cloud platform, streamlines workflows by bridging field and office tasks, delivering unmatched efficiency.

Designed to be lightweight, intuitive, and finely attuned to local operational preferences, the instrument ensures superior performance. At its core lies a high-precision MEMS sensor, guaranteeing reliable and stable measurements. Recognized throughout the industry for its exceptional build quality and unwavering support, the Retisberg Inclinometer is the trusted choice for critical monitoring applications in foundation pits, slopes, dams, bridges, and beyond.

Product Advantages

Unmatched Precision: Features an inclinometer probe with ultra-high accuracy and stability, ranking among the world's leading standards.

One-Person Operation: The mobile data acquisition software includes an automatic collection mode, enabling a single operator to complete all field data collection tasks.

Rapid Data Capture: Exceptional collection speed allows for a typical 30-meter inclinometer hole to be read in as little as 5 minutes.

Extended Battery Life: Utilizes low-power Bluetooth data transmission, supporting continuous operation for up to 80 hours on a single charge.

Rugged & Waterproof Design: The waterproof cable reel ensures reliable performance in harsh weather and demanding working conditions.

Real-Time Cloud Sync: Collected data is synchronized directly to the cloud, allowing for real-time viewing of measurements, single-displacement, and cumulative curves on a web platform, which intelligently assesses data quality.

Technical Specifications

Function Type:	Single-Axis Sliding Inclino- meter System	Dual-Axis Sliding Inclino- meter System
Model Number:	SCIS 50S	SCIS 50D
System Net Weight:	7.5kg	7.5kg
Number of Sensors:	MEMS*1	MEMS*2
Probe Length:	0.75 m	0.75 m
Wheelbase (of guide wheels):	0.5 m	0.5 m
Measuring Range:	A-axis travel (or Range): $\pm 15^\circ$	A-axis travel (or Range): $\pm 15^\circ$ B-axis travel (or Range): $\pm 15^\circ$
Resolution:	A-axis resolution: 0.005 mm	A-axis resolution: 0.005 mm B-axis resolution: 0.005 mm
Repeatability:	$\pm 0.003^\circ$	$\pm 0.003^\circ$
Battery Continuous Operation Time:	80 Hours	80 Hours
Operating Temperature:	$-20^\circ\text{C} \sim 70^\circ\text{C}$	$-20^\circ\text{C} \sim 70^\circ\text{C}$
Primary Material:	Corrosion-Resistant Steel	Corrosion-Resistant Steel
Compliance Standard:	JB/T 12204-2015	JB/T 12204-2015

Application Fields

Why Choose Us?

Unmatched Precision and Data Integrity

The Soilcreate Inclinometer delivers exceptional accuracy and rock-solid reliability, outperforming leading competitors through a suite of proprietary technologies. At its core is a high-precision sensor employing a capacitive grating encoder. This is enhanced by our innovative filtering and data processing algorithms, as well as a unique self-developed "Zero-Point Calibration" technique. Together, these innovations ensure outstanding long-term data stability and positional accuracy, setting a new benchmark for comprehensive performance in the industry.

Bluetooth Transmission with Ultra-Long Battery Life

The Soilcreate Inclinometer integrates a low-power consumption Bluetooth module, utilizing a wireless connection for data transmission. This design makes data transfer faster and more efficient while allowing for completely cable-free operation during field data collection. With power consumption optimized to an extreme level, the system achieves an exceptional battery life of up to 80 hours.

One-Person Operation for Maximum Efficiency

The Soilcreate Inclinometer's lightweight and portable design enables highly efficient operation by a single person. The complete process for taking dual-direction readings in a borehole is significantly faster than with conventional alternatives. An innovative human-machine interface allows for seamless switching between automatic and manual modes, which slashes labor costs and dramatically increases overall job site efficiency.

Superior Waterproofing & Exceptional Durability

Engineered for harsh environments, the Retisberg Inclinometer boasts a unique waterproof design (rated for 3MPa pressure), making it impervious to rain and dust. The probe's extreme durability, verified by pre-delivery vibration testing, ensures reliable performance against knocks and impacts on complex job sites. Furthermore, it utilizes premium imported control cables designed to withstand substantial tensile force.

Mobile Collection & Cloud Synchronization

The system utilizes a thoughtfully designed mobile app for wireless data acquisition, storage, and instant sharing, which lowers the technical barrier for operators. With real-time cloud synchronization, measurement values, single displacements, and cumulative changes can be viewed, analyzed, and downloaded remotely. This facilitates rapid data quality assessment and achieves a seamless "data-to-cloud" workflow, dramatically improving internal office efficiency.

Unmatched After-Sales Protection & Service

The Retisberg Sliding Inclinometer is backed by robust product quality and a comprehensive after-sales service system. We pride ourselves on low repair costs and a rapid response mechanism. Strategically located in Suzhou, we can address simple issues on the same day equipment is received. For repairs requiring extended time, we provide replacement units to ensure no interruption to your valuable data collection and maintain project continuity.
